

4-leg chain sling

Product Code: 0499
Availability: In Stock

Price: 71.98€

Ex Tax: 59.00€

Description

Four leg chain sling

The four leg chain sling is designed for lifting and securing heavy loads in industrial, construction, and logistics applications. With four strong lifting legs, it provides even load distribution and exceptional stability during lifting operations. Made from high-quality alloy steel, it is resistant to wear, stretching, and corrosion, ensuring a long service life and safe operation even under demanding conditions.

The four leg chain sling is equipped with durable hooks and reliable couplings that allow quick and safe load attachment. It is available in various lengths and load capacities, manufactured in accordance with European quality and safety standards.

Additionally, the sling is fitted with a chain shortener, which allows for easy adjustment of the length of each leg according to the lifting requirements. This feature increases flexibility, improves load balance, and enhances overall safety.

Due to its robustness, reliability, and long lifespan, it is an excellent choice for professional users who demand safety, efficiency, and durability in daily operations.

Product characteristics:

- Material: alloy steel

- Surface: black oxide
