

Vacuum lifter for sandwich panels and trapezoidal roofing - DISPLAY MODEL

Product Code: 0495
Availability: Pre-Order

Price: 2318.00€

Ex Tax: 1900.00€

Description

Vacuum lifter for sandwich panels and trapezoidal roofing

The vacuum lifter for sandwich panels and trapezoidal roofing is a modern solution for fast, safe, and efficient handling of construction elements. It is designed for installation on construction sites, but due to its reliability, it is also suitable for use in production and other processes where frequent lifting and positioning of panels is required.

Using the vacuum lifter for sandwich panels and trapezoidal roofing significantly simplifies the handling of heavier and larger panels, as it allows precise lifting, moving, and positioning without damaging the material. It comes with a wireless remote control for easy operation, and the entire system runs on a battery, ensuring complete mobility and independence from external power sources.

Whether you are installing façades, laying roofs, or working in industrial production, the vacuum lifter for sandwich panels and trapezoidal roofing offers a reliable and durable solution that meets the highest quality standards in construction and industry.

Technical data:

- Capacity: up to 300 kg
- Suction pad size: 530 × 100 mm
- Number of suction pads: 8

- Dimensions: 5000 × 1000 (telescopic – transverse and longitudinal adjustment possible)
- Device weight: approx. 179 kg
- Rotation: 360°
- Tilt (flip): 90°
- Voltage: DC 12 V
- Battery capacity: 24 Ah
- Continuous operation: up to 24 hours
